WARNING

Is your sharpener ruining your scissors?

Simply compare your sharpened edge to a new edge and the answer is painfully obvious... use this illustrated chart to match your previously sharpened scissors. *Shear Integrity never removes too much critical metal from your scissors!*

3 Common Examples of Incorrect Sharpening

• Always meticulously inspect your scissors before and after they have been sharpened

• Our sharpening is triple-redundant then double checked by a second tech before finally inspected and approved by YOU!

• Shear Integrity provides a hand held magnifying lens for further scrutiny and inspection!

• You can even test and compare your sharpened scissors to any of our NEW shears!
